

OpenCms Days 2011

Workshop Track:

The OpenCms 8

Demo Template Modules in Detail

Polina Smagina,
Alkacon Software GmbH

- Template comparison OpenCms 6, 7 and 8
- Template III and content modules

Dev Demo Template

OpenCms 6 and 7

Alkacon

Template One

- OpenCms 6
- Many features
- Very complicated
- Based on a project for a customer
- Difficult to understand

Template Two

- OpenCms 7
- Combined template features and demo examples
- Template and resources are part of the same module
- Still not easy to understand
- For simple websites

Template III

- The best pratice using OpenCms 8
- Can be directly used for website development
- Loose coupling of template and content types modules
- As a starting point for a web-project

Dev Demo

- Well documented easy to understand Use Cases
- Playground for template developers

- OpenCms 8 Template III frontend
 - Navigation
 - Configurable Layout
- No dependency between template module and the content types:
 - OpenCms 8 Article
 - OpenCms 8 News
 - OpenCms 8 Event
 - OpenCms 8 List
 - OpenCms 8 Login
 - OpenCms 8 Search
 - OpenCms 8 Twitter

Alkacon

Main navigation, left navigation, breadcrumb

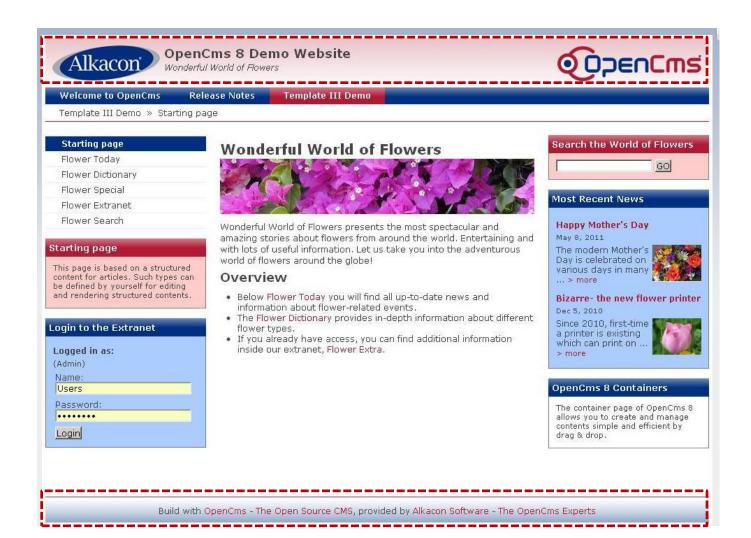

- <cms:navigation>
- Attributes:
 - type: treeForFolder, forFolder, forSite, forResource, breadCrumb
 - startLevel: property "NavStartLevel" on resource or folder
 - endLevel
 - var

Alkacon

Configurable Header and Footer

- Drop header and footer to the model containerpage
 - /_contents/_new/pages/default.html
- Edit the xmlcontent to add the required html
 - Header: html of the header content
 - Footer: html of the footer content

- Remainder: Set the path to the model containerpage in the sitemap configuration
 - /_config/sitemap_restype.config

- Defines 2- or 3-columns layout
- Use property "Template columns" by editing properties of the container page directly in the sitemap.

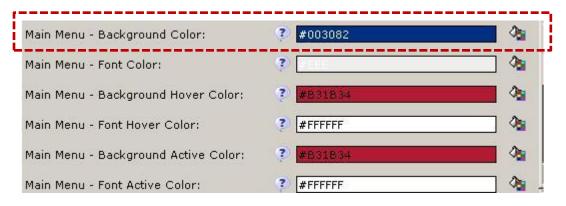

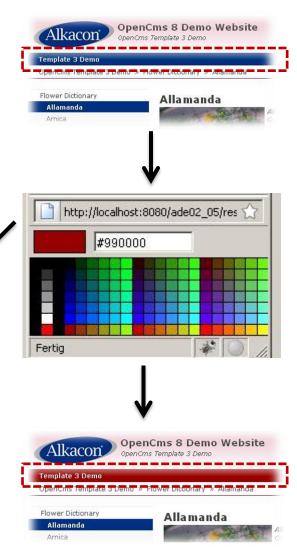

Alkacon

- Xmlcontent as configuration
- t3style
- Color settings of the template
 - /_config/style

Example: Main Menu Background

Alkacon

 Set properties on the site folder or on a single page:

```
`style.columns'=3
`style.layout'=/_config/style
```

Template code:

DEMO

- Template 3 Layout
 - 2/3 columns
 - header and footer

Demo

Demo

OpenCms 8 Article

- v8article
- Content
 - Title
 - Paragraph (Headline, Text, Image)
 - Category
- XSD: Image Alignment
- Settings:
 - Image Alignment
 - Box Schema (Color)

- v8news, v8event
- Extended article content

• Event:

- Event data like start and end date, location
- Availability with release and expiration

News

- Author name and e-mail
- Availability with release and expiration

Settings:

- Image Alignment
- Box Schema (Color)
- Show location(only event), Show time

Article - Image alignment

Image Alignment:

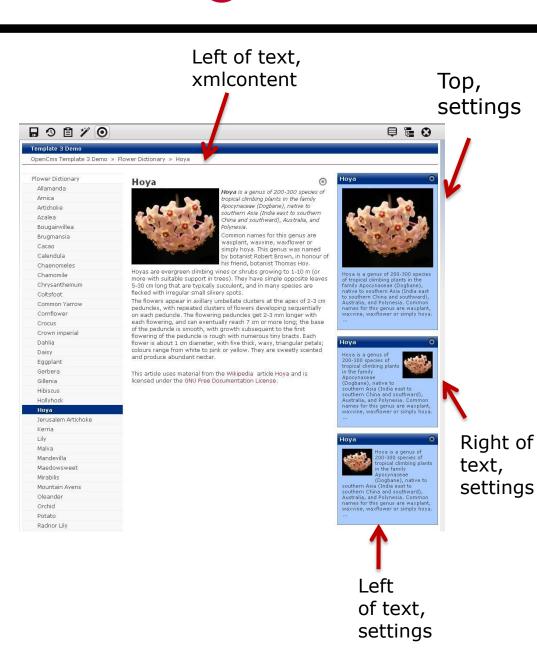

- Left of text
- Right of text
- Top
- Left of headline
- Right of headline

XmlContent:

- For each content
- As default alignment

Settings:

For each element

XSD configuration:

```
<xsd:schema xmlns:xsd=http://www.w3.org/2001/XMLSchema ... >
   <xsd:element name="V8Articles" type="OpenCmsV8Articles"/>
   [...]
   <xsd:annotation>
   <xsd:appinfo>
         [...]
         <settings>
                   <setting name="imgalign"
                           nice-name="Image Align"
                            type="string"
                            widget="select"
                           widget-config =
                                      "left: %(key.v8.article.image.left) |
                                      right: %(kéy.v8.article.image.right)|
                                       [..]"/>
         </settings>
   </xsd:appinfo>
   </xsd:annotation>
</xsd:schema>
```

Article - Image alignment

Alkacon

Formatter:

[..]

```
<c:set var="imgalign">
   <cms:elementsetting name="imgalign" default="left" />
</c:set>
<c:choose>
   [...]
   <c:when test="${imgalign == 'left'}">
         <c:set var="imgclass">left</c:set>
   </c:when>
   <c:when test="${imgalign == 'right'}">
         <c:set var="imgclass">right</c:set>
   </c:when>
</c:choose>
[...]
```

Configuration in the XSD file:

- Available setting widgets:
 - string, select, datebox, vfslink,
 checkbox, multiselect, radio

DEMO

- Content types
 - Article
 - News
 - Event

Demo

Demo

Dynamic Configurable List

Alkacon

v8list

- List of resources
- Title / top and bottom text
- Collector configuration
- Mapping configuration

OpenCms 8 List - Collector

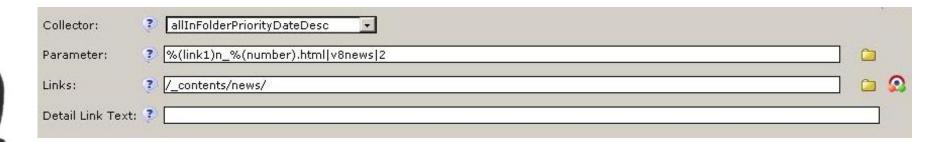

Alkacon

- Define the resources to display in the dynamic list
 - Choose one of the available collectors
 - Set the collector parameter

/_contents/events/e_%(number).html|v8event|2
The path to resources to collect | Resource type | Number of resources

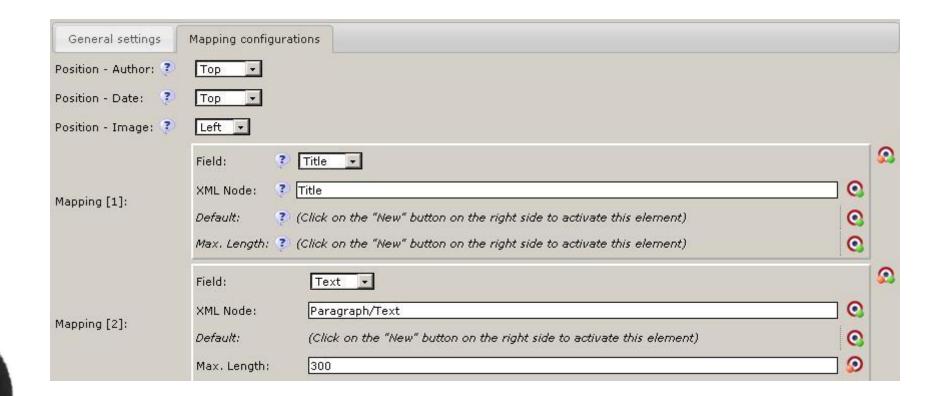

- Link validation
 - Set the vfs link to the resource folder
 - Use macro as collector parameter

OpenCms 8 List - Mapping

- Mapping configuration
 - Position: Author, Date, Image
 - Mapping: Field -> Xml node of the chosen resource type
 - Max length of the text

DEMO

Demo

- Content types
 - Dynamic Configurable List

Demo

OpenCms 8 Login Form

Alkacon

v8login

- Content:
 - Title
 - Text
- Login form
- Log in for a protected area on the website

OpenCms 8 Search Form

Alkacon

v8search

- Content:
 - Title
 - Text
 - No results
 - Error
- Search configuration
 - Search Index
 - Search source
 - Matches pro page
- Fulltext search on the website

OpenCms 8 Search Form

- Using search form:
 - Drop a search form to the left or right column
 - Add a new search form (detail*) page in the sitemap
 - Make detail default
- Now the search results are displayed on the detail page

DEMO

- Content types
 - Login Form
 - Search Form

Demo

Demo

OpenCms 8 Twitter Feed

- v8twitter
- Official twitter widget
- XmlContent
 - Title
 - User
 - Backgroundcolor
 - Links Color
- Settings:
 - Twitter box height

- Dynamic include of additional javascript and css
- Add new tag to the template <head> :

```
<!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.01//EN" "...">
<html><head>
    [...]

<cms:headincludes type="javascript" />
    <cms:headincludes type="css" />

    [...]

</head><body>
[...]
```

Add new node in the content xsd:

```
[...]
<xsd:annotation>
<xsd:appinfo>
[...]
<headincludes>
<headinclude type="javascript" uri="http://widgets.twimg.com/j/2/widget.js" />
<headinclude type="css" uri="/system/modules/.../resources/css/style.css"/>
</headincludes>
</xsd:appinfo>
</xsd:annotation>
```

Formatter:

```
<cms:formatter var="content" val="value">
<div class="twitter-box">
   <c:choose>
        <c:when test="${cms.edited}" >
                 Please reload 
        </c:when>
        <c:otherwise>
                <script type="text/javascript">
                        new TWTR.Widget(
                         [...]
                         ).start();
                </script>
        </c:otherwise>
   </c:choose>
</div>
</cms:formatter>
```

DEMO

- Content types
 - Twitter

Demo

Demo

Demo

- Using and customizing Demo Templates
 - Customize Temlate III
 - Header and Footer
 - Stylesheet for the site or sub sites
 - 2 or 3 columns
 - Flexible image alignment
 - Individual settings for elements
 - Dynamic elements like lists, twitter feed and search

- Extensibility of content types
 - New formatter for content types
 - New settings to control layout and content of element
 - Additional javascript or css with <cms:headinclude> tag
 - Create new content type module to use with Template III
 - Use available content module as a copy model
 Important: Check the resource type ids
